

CONVINCING ARGUMENTS

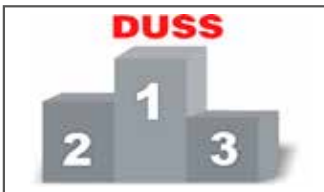

Top quality made in Germany

DUSS products convince with prolonged service life, superior performance and uncompromising quality. A consistent high depth of our production facilities ensures that our high quality standards are always maintained. For example all motors and gearing for our machines are exclusively made in our own factory in Neublach located in the Black Forest, Germany.

More than 90 years of experience

Founded in 1920 we can look back to a wealth of experience grown in over ninety years. This unique competence flows into the development and production of our electric power tools.

A company of distinction

In a survey conducted by the German publishing house "markt intern", DUSS came first in the categories of product quality, punctuality and completeness of deliveries and sales policy. The brand name DUSS is synonymous with products and services of the highest quality standards.

Performance

DUSS knows that high-powered performance coupled with low machine weight are key. As a result of intelligent optimization and many years of expertise, the gearing and percussion mechanism are perfectly harmonised. Our machines are characterized by an exceptionally favourable weight-to-performance ratio, balanced weight distribution and convenient handling.

Safety

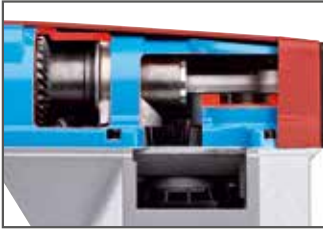

The operation of our machines is simple and comfortable. Our machines offer the user the requisite safety in every aspect of work. Our low-wear safety clutch with gentle starting torque is unique. It protects the user from injury and the motor from being overloaded.

Ergonomics

The special details incorporated into DUSS machines permit easy and ergonomic use. Balanced weight distribution, effective vibration damping systems, ergonomically shaped handles and a trigger-lock for continuous operation guarantee great working comfort.

The screw-in, auxiliary handle for compressor-like downward chiselling allows a non-fatiguing, back-saving posture.

Prolonged service life

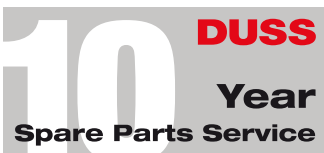

High-quality materials, sophisticated designs and exceptional workmanship guarantee prolonged service life and a minimum of wear:

- The double housing which protects the mechanism ensures prolonged service life
- A self-contained lubrication system provides continuous lubrication and ensures the user of freedom from maintenance

Accessories

DUSS offers a comprehensive range of high quality tools and accessories to complement its power tools. Each tool and accessory is designed specifically for our machines and offers the utmost functional efficiency and durability.

Spare parts service

We guarantee the continuous availability to our customers of all spare parts for the current product range and assure them that we will continue to supply spare parts for at least ten years after the production of the corresponding machine has been discontinued. As a rule, our great vertical depth of production ensures a reliable supply of spare parts over many years.

Tailor-made solutions

Standard machines and accessories are not able to meet all individual requirements. When standard solutions fail to provide precisely what you are looking for, we are happy to help with customised alternatives. We will use our extensive pool of experience to develop, design and produce the right individual solution for your specific application.

Focus on diamond core drills – Premium choice for 100% flexibility

Our DUSS diamond core drills provide construction industry professionals with a meticulously designed and engineered system. A range of different diamond core drills and an extensive, carefully considered spectrum of different accessories mean that every conceivable application need is catered for.

Universally usable

Our machines can be used both hand-held and mounted in drill stands as well as for wet and dry drilling. No time-consuming adaptations required.

Compact designs

DUSS diamond core drills are ideal for hand-held drilling, even in confined spaces or up a ladder.

Straightforward centring, tools changed in seconds

With the DUSS quick centring bit, rapid hand-held centring is possible. No pilot hole is necessary. The spring-loaded centring bit retracts when drilling starts. The DUSS quick release system permits tool changes in just seconds, as well as fast, simple removal of the drill core. Plug on the tool, twist, done. No auxiliary tools needed. Time-saving innovations that simplify the daily work.

Dust-free dry drilling

Efficient dust extraction increases the service life of the core bits, cools the cutting tips, ensures high drilling performance and reduces dust when working.

Practical wet drilling

Precise preselection and constant control of the needed water amount allows convenient wet drilling.

Wet drilling in concrete, with BS drill stand

Dry drilling in a chimney pipe with dust extraction, hand-held

Dry drilling in masonry with dust extraction, hand-held

Electrical socket sinking in concrete – wet, hand-held

Clean wet drilling in concrete with DUSS suction cup, hand-held

Wet drilling in a concrete shaft, hand-held

Wet drilling in a concrete pipe, with BST drill stand

Dry drilling in a plastic pipe, hand-held
